User Manual Inbay Charger Cup / Inbay pockets

The Inbay wireless charging system enables you to charge any
Qi-compatible smartphone without any annoying cables
Smartphones which do not support the Qi-standard can be upgraded
using a charging cover or Qi-receiver.
A list of available charging covers can be found at www.inbay.systems
To charge the smartphone insert it into the Inbay pocket /
or charging cup - directly over the rubber mat

Only for INBAY applications with LED
In idle mode of the Inbay pocket or charging cup the status LED lights
red. When charging starts the status LED turns from red to blue and
you hear once an acoustic signal.
When charging is completed the smartphone continuous
to be supplied with power

In case of any trouble with your Inbay-System please take a look
at the troubleshooting chart below:

Description	Explanation
LED is not illuminated	Ignigiton switched on? Please check connectors
LED is illuminated red	No Qi-compatible receiver found, or smartphone is not correctly positioned
LED blinks alternately red and blue	Smartphone is not positioned direcly over the spool and has to be re-positioned
Error „this accessory may not be supported" appears	This just shows a completed charging process Now the smartphone continous to be supplied with power
The radio reception changes extremly - and/or rhythmic background noises can be heard	The reason for background noises is a malefunc- tion of the antenna socket or the antenna cable. A replacement of the components will solve the problem
